Release Notes for AFP2PDF Plus 1.5

Release Notes for AFP2PDF Plus Version 1.5

What's new in Release 1.5?

These new functions and updates are included in AFP2PDF Plus Version 1.5:

- AFP2PDF Plus Config UI. A new desktop application that lets you create font mapping configuration files without editing text files manually. Load your AFP files, review the fonts they contain, select a target font for each one, and preview the output PDF with and without the mappings applied. For more information, see *AFP2PDF Plus Config UI User Guide*.
- AFP2PDF Plus now supports Windows Server 2025.
- You can now download AFP2PDF Plus releases and fixes directly from the Ricoh download site.
- Updated Bouncy castle open source software to version 1.85.
- Various code fixes.

Limitations

- When AFP data formatted for N-up portioning is encountered, the multiple partitions that make up the physical AFP page are converted to separate pages in the PDF file.
- Only limited support is available for object containers with TIFF and JFIF image formats.
- Color management resource (CMR) information contained in AFP resources is ignored.
- Unicode Complex Text, such as bidirectional layout processing and glyph processing, is not supported.
- Linked TrueType fonts and the use of a Resource Access Table (RAT) are not supported.
- Creating a PDF document with both linearization and certificate does not work.
- When you run the trial version of the transform in server mode and the certificate has expired, AFP2PDF Plus becomes unresponsive.
- AFP2PDF Plus requires IBM Semeru Runtimes 17 or later, or a Java distribution from an alternative provider. Legacy IBM SDK, Java Technology Edition is not supported.

Product documentation

See *AFP2PDF Plus Transform User's Guide*, for installation and post-installation tasks.
